Orangeburg, New York 10962

**Re: Air Quality Assessment
Orangeburg, New York
Langan Project No. 100630201**

Dear Mr. Moran:

As requested, Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan), has completed an air quality assessment for select areas within the Town of Orangetown, New York.

The Town of Orangetown retained Langan to complete air testing in several locations on the east side of town. The purpose of this investigation was to evaluate air quality by completing a targeted air sampling investigation and comparing the analytical results against accepted industry standards and guidance criteria. The following sections include our findings generated during the air quality assessment.

Langan's Air Quality Assessment

Summary of Visual Assessment

A Langan environmental professional was escorted by representatives of the Town of Orangeburg Engineering Department to visually assess various areas of concern within the Town on 19 December 2016. During the site walk, the following locations were identified by the Town of Orangeburg Engineering Department:

- Glenshaw Road (Eastern Spur)
- Moison Road (Southern End)
- Cottage Lane School (Playground)
- Town of Orangeburg Rail Trail (Northern Area)
- Town of Orangeburg Rail Trail (Southern Area)
- Town of Orangeburg High School

There were no unusual odors encountered in any of the six locations sampled during the course of Langan's assessment.

Air Quality Measurements – Particulate Matter

Air monitoring was completed between 19 and 20 January 2017 at four locations to assess existing conditions. The particulate monitoring locations were selected by the Town of Orangetown engineering department.

The particulate matter data was collected with TSI Dustrack 2 Environmental Monitors that were setup on tripods to an approximate height of 4 feet above ground surface. The Dustracks were placed within environmental enclosure boxes to protect them from the elements and an omnidirectional sampling port was attached to each box.

Temperatures ranged from 45 degrees to 55 degrees and no rain or snow occurred during the sampling event. Air quality data recorded for this assessment included measurements for inhalable particulate concentrations (i.e. particulate matter less than 10 microns in diameter (PM10)). The measurements were compared against applicable standards and/or guidelines that have been promulgated by respected industry organizations (specifically the United States Environmental Protection Agency (USEPA) National Ambient Air Quality Standards (NAAQS)).

The following is a summary of the PM-10 measurements which were collected during this investigation:

Location	PM-10 Maximum Concentration	PM-10 Time Weighted Average	USEPA NAAQS Standard (24 hour averaging time)
Glenshaw Road	15 ug/m ³	3 ug/m ³	
Moison Road	21 ug/m ³	9 ug/m ³	
Cottage Lane School	70 ug/m ³	9 ug/m ³	
Orangeburg High School	26 ug/m ³	8 ug/m ³	150 ug/m ³

All of the PM-10 measurements were within or below the guidelines/standards that they were compared against. As such, no additional action is required to address these parameters.

Analytical Results of VOC Samples

As part of the January 2017 assessment, Langan also completed air sampling in six locations to determine the presence/absence of various chemicals commonly analyzed for in environmental assessments. The locations were selected by the Town of Orangetown engineering department.

The air samples were collected in 6 liter, stainless steel canisters with the intakes of the canisters placed in the breathing zone (i.e., three to five feet above the ground). The canisters were prepared in accordance with analytical procedures associated with United States Environmental Protection Agency ("USEPA") Method TO-15. The SUMMA® canisters were submitted to a certified laboratory and were analyzed for the full VOC priority contaminant list using USEPA Method TO-15.

None of the chemicals were detected at concentrations above regulatory criteria (Occupational Safety and Health (OSHA) Permissible Exposure Limits (PELs) and National Institute for Occupational Safety and Health (NIOSH) Recommended Exposure Limits (RELs)). A summary of the data and regulatory criteria is provided as Table 1.

The complete laboratory report is provided as Attachment A. The table below summarizes the sample locations and lists the chemicals identified in each location which was sampled:

Table 2 – VOC Sampling Locations and Results

Location	Total VOC Concentration (ppm)	Chemicals Identified
Glenshaw Road	16.59	Methyl Ethyl Ketone, Acetone, Benzene, Carbon Tetrachloride, Chloromethane, Dichlorodifluoromethane, Isopropyl Alcohol, Methylene Chloride, Tetrachloroethylene, Toluene, Trichlorofluoromethane
Moison Road	16.67	Methyl Ethyl Ketone, Acetone, Benzene, Carbon Disulfide, Carbon Tetrachloride, Chloromethane, Dichlorodifluoromethane, Ethyl Acetate, Methylene Chloride, Tetrachloroethylene, Toluene, Trichlorofluoromethane
Cottage Lane School	13.12	Methyl Ethyl Ketone, Acetone, Benzene, Carbon Tetrachloride, Chloromethane, Dichlorodifluoromethane, Methylene Chloride, Vinyl Chloride, Trichlorofluoromethane
Rail Trail North	61.1	Methyl Ethyl Ketone, Acetone, Benzene, Carbon Tetrachloride, Chloromethane, Dichlorodifluoromethane, Ethyl Acetate, Ethylbenzene, Heptane, Hexane, Xylene, Methylene Chloride, Tetrachloroethylene, Toluene, Trichloroethylene, Trichlorofluoromethane
Rail Trail South	20.43	Methyl Ethyl Ketone, Acetone, Benzene, Carbon Tetrachloride, Chloromethane, Dichlorodifluoromethane, Isopropyl Alcohol, Methylene Chloride, Tetrachloroethylene, Toluene, Trichloroethylene, Trichlorofluoromethane
Orangeburg School	High 20.55	Methyl Ethyl Ketone, Acetone, Benzene, Carbon Disulfide, Carbon Tetrachloride, Chloromethane, Dichlorodifluoromethane, Ethyl Acetate, Isopropyl Alcohol, Methylene Chloride, Tetrachloroethylene, Toluene, Trichloroethylene, Trichlorofluoromethane

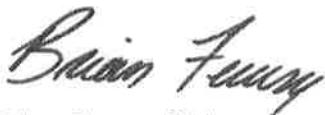

Findings

Langan's visual assessment, air quality measurements and air sample results did not identify air quality issues on the days outlined in this report. However, please note that the data only covers environmental conditions over a specific period of time. The data collected during this investigation should not be used to determine air quality during past or future conditions.

CLOSURE

We trust that the information provided in this report adequately addresses our scope of work.

Very Truly Yours,
**Langan Engineering, Environmental, Surveying
and Landscape Architecture, D.P.C.**

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 24, 2017 and listed below. The project was identified as your project: **100630201**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 17A0783

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
9. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Notes and Definitions

QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.

CCV-A The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>30% Difference for average Rf'). This applies to dectected analytes only.

* Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.

ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.

LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.

MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
